This publication seeks to provide cohesive information in a weekly basis on the foreign notifications of the WTO members under the TBT agreement on their notified technical regulations and conformity assessment procedures.

Philippine exporters and relevant stakeholders are invited to review the proposed regulations. Comments that will be received by the BPS will be transmitted to the governments concerned for their consideration.

### IN THIS WEEK'S ISSUE

A total of 107 notifications on Construction Materials and Building, Domestic and Commercial Equipment, Entertainment, Sports, Food and Beverages, Glass and Ceramics Industries, Paint and Color Industries etc. from the Brazil, Gulf Coordinating Council, the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu, Uganda, United States of America and other countries are listed.

We would like to hear from you. For any questions, suggestions or requests for full text of notified regulations, please contact us at [bps@dti.gov.ph](mailto:bps@dti.gov.ph)

<b>AIRCRAFT AND SPACE VEHICLE ENGINEERING</b>					
TEXTILES	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/892</a>	Hospital cotton bed sheets <i>This Draft Uganda Standard describes the constructional details of cotton hospital bed sheets.</i>	60 days from notification
<b>CIVIL ENGINEERING</b>					
ROAD ENGINEERING	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/878</a>	Roads and parking lots <i>This Draft Uganda Standard covers the determination of roads and parking lots pavement condition through visual surveys using the pavement condition Index (PCI) method of quantifying pavement condition. The values stated in SI units are to be regarded as standard. The values given in parentheses are mathematical conversions to inch-pound units that are provided for information only and are not considered standard.</i>	60 days from notification

ROAD CONSTRUCTION MATERIALS	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/879</a>	<p>Pavements</p> <p><i>This Draft Uganda Standard covers the measurement of the skid resistance of a pavement or other trafficked surface using the continuous reading, fixed-slip technique. This test method covers braked wheel measurements obtained with less than 100% slip. It does not cover side force measurements. This test method provides a record of the skid resistance along the whole length of one track of the test surface and enables averages to be obtained for specified test segments. This test method is used to measure skid resistance on a wide variety of surfaces in a wide variety of circumstances. Consequently, there are many different designs of continuous reading, fixed-slip measuring equipment (CFME) and as many different test procedures governing their use. This test method does not attempt to detail these different equipments and procedures but does set out the essential common principles.</i></p>	60 days from notification
<b>CONSTRUCTION MATERIALS AND BUILDING</b>					
CEMENT, GYPSUM, LIME, MORTAR	CHINA	10/07/2018	<a href="#">G/TBT/N/CHN/1278</a>	<p>Common Portland cement</p> <p><i>This amendment cancels the strength grade (32.5R) of composite Portland cement.</i></p>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/862</a>	<p>Cement</p> <p><i>This Final Draft Uganda standard gives the specifications which include mechanical, physical and chemical requirements of 27 distinct common cements, seven sulphate resisting common cements as well as three distinct low early strength blast furnace cements and two sulphate resisting low early strength blast cements and their constituents. The standard also gives the composition of each cement in terms of proportions and requirements of the constituents which are to be combined to produce these distinct products in a range of nine strength classes. Furthermore, this standard states the conformity criteria and the related rules. Necessary durability requirements are also given.</i></p>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/863</a>	<p>Cement</p> <p><i>This Final Draft Uganda Standard specifies the scheme for the assessment and verification of constancy of performance (AVCP) of cements to their corresponding product specification standards, including certification of constancy of performance by a product certification body.</i></p>	60 days from notification

CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/864</a>	<p>Cement</p> <p><i>This Final Draft Uganda Standard describes the method for the determination of the compressive and, optionally, the flexural strength of cement mortar. The method applies to common cements and to other cements and materials. It may not apply to cement types that have, for example, a very short initial setting time.</i></p> <p><i>The method is used for assessing whether the compressive strength of cement is in conformity with its specification and for validation testing of standard sand, or alternative compaction equipment.</i></p> <p><i>This Final Draft Standard describes the reference equipment and procedure and allows alternative compaction equipment and procedures to be used provided that they have been validated in accordance with the appropriate provisions in this standard. In the event of a dispute, only the reference equipment and procedure are used.</i></p>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/865</a>	<p>Cement</p> <p><i>This Final Draft Uganda Standard specifies the methods for the chemical analysis of cement. The standard describes the reference methods and, in certain cases, an alternative method which can be considered to be equivalent. In the case of dispute, only the reference methods are used. The standard also describes methods which apply principally to cements, but which can also be applied to their constituent materials and other materials. An alternative performance-based method using X-ray fluorescence (XRF) is described for SiO<sub>2</sub>, Al<sub>2</sub>O<sub>3</sub>, Fe<sub>2</sub>O<sub>3</sub>, CaO, MgO, SO<sub>3</sub>, K<sub>2</sub>O, Na<sub>2</sub>O, TiO<sub>2</sub>, P<sub>2</sub>O<sub>5</sub>, Mn<sub>2</sub>O<sub>3</sub>, SrO, Cl and Br.</i></p>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/866</a>	<p>Cement</p> <p><i>This Final Draft Uganda Standard specifies the methods for determining standard consistence, setting times and soundness of cements.</i></p> <p><i>The method applies to common cement and to other cements and materials. It may not apply to other cement types that have a very short initial setting. It describes the reference methods and allows the use of alternative procedures and equipment, as indicated in notes, provided that they have been calibrated against the reference methods. In the event of dispute, only the reference equipment and procedures described in this Final Uganda Standard are used.</i></p>	60 days from notification

CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/867</a>	Cement  <i>This Final Draft Uganda Standard describes the procedures for determining the contents of the most of the constituents of cements that fall within the scope of FDUS 18-1. The method given in Clause 6 applies to all cements, whatever the number and nature of their constituents. In the case where the operator is certain that the cement contains only, over and above the clinker and set regulator, blast furnace slag, fly ash or pozzolana, the other methods given in Clause 7 can be applied.</i>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/868</a>	Cement  <i>This Final Draft Uganda Standard specifies the method of measuring the pozzolanicity of pozzolanic cements conforming to EAS 18-1. This standard does not apply to Portland pozzolana cements or to pozzolanas.</i>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/869</a>	Cement  <i>This Final Draft Uganda Standard describes three methods for determining the fineness of cement and applies to all the cements defined in EAS 18-1. The sieving method serves only to demonstrate the presence of coarse cement particles. This method is primarily suited to checking and controlling the production process. The air -jet sieving method measures the retention on sieving and is suitable for particles which substantially pass a 2.0- mm test sieve. It may be used to determine the particle size distribution of agglomerates of very fine particles. This method may be used with test sieves in a range of aperture sizes, for example 63 µm and 90 µm. The air permeability method (Blaine) measures the specific surface (mass related surface) by comparison with a reference cement sample. The determination of the specific surface serves primarily to check the consistency of the grinding process of one and the same plant. This method only enables a limited assessment to be made of the properties of the cement in use.</i>	60 days from notification
CEMENT, GYPSUM, LIME, MORTAR	UGANDA	09/07/2018	<a href="#">G/TBT/N/UGA/870</a>	Cement  <i>This Final Draft Uganda Standard describes the equipment to be used, the methods to be followed and the provisions to be complied with for taking samples of cement representative of given lots for testing to assess the quality of products prior to, during or after delivery.</i>	60 days from notification

With the availability of materials used for gas hoses, the Bureau of Standards, Metrology and Inspection proposes to expand the current scope to cover metallic flexible hoses for gas, plastic hoses for fuel gas and wire reinforced rubber hoses to be subject to mandatory inspection. The conformity assessment procedure for such products will be Registration of Product Certification (Module II and ModuleIII) .</i>	60 days from notification
VESSELS AND CONTAINERS MOUNTED ON VEHICLES	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/873</a>	Vapor degreasers, cold cleaning tanks, van trailers, ships or barges, pits or sumps.  <i>This Draft Uganda Standard covers recognized procedures necessary to protect the health and safety of workers required to enter confined spaces. These procedures are particularly applicable to entry into the confined areas associated with the use of halogenated organic solvents. Confined areas addressed in this practice include, but are not limited to: vapor degreasers, cold cleaning tanks, storage vessels, tank cars and trucks, van trailers, ships or barges, pits or sumps, and unventilated rooms. This practice does not necessarily address entry into all confined spaces nor does it address the decision strategy involved in requiring such entry. Although this practice describes specific safety steps to be taken for entry into confined spaces, it is not intended to preclude the use of any additional measures that may be deemed necessary for a particular situation.</i>	60 days from notification

<b>PAINT AND COLOUR INDUSTRIES</b>					
PAINTS AND VARNISHES	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/874</a>	<p>Traffic paint</p> <p><i>This Draft Uganda Standard covers a laboratory procedure for determining the no-pick-up time of a traffic paint. The method uses a wheel consisting of a metal cylinder with rubber O-rings. The wheel is rolled down a ramp over a freshly applied traffic paint film repeatedly until there is no transfer of paint to the rubber rings. The elapsed time from paint film application to point of no paint transfer is the no-pick-up time. Key variables to be controlled during testing are film thickness, temperature, humidity, and air flow. The values stated in SI units are to be regarded as the standard. The values given in parentheses are for information only.</i></p>	60 days from notification
PAINTS AND VARNISHES	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/876</a>	<p>Painted panels, plastic plaques, textile swatches</p> <p><i>This Draft Uganda Standard covers the calculation, from instrumentally measured color coordinates based on daylight illumination, of color tolerances and small color differences between opaque specimens such as painted panels, plastic plaques, or textile swatches. Where it is suspected that the specimens may be metameric, that is, possess different spectral curves though visually alike in color, Practice D4086 should be used to verify instrumental results. The tolerances and differences determined by these procedures are expressed in terms of approximately uniform visual color perception in CIE 1976 CIELAB opponent-color space, CMC tolerance units, CIE94 tolerance units, the DIN99 color difference formula given in DIN 6176, or the new CIEDE2000 color difference units.</i></p>	60 days from notification

				<p>placed on the road delineation to measure the retroreflection at a prescribed geometry. The restriction to bead based materials is for the purpose of ensuring a sufficiently gradual optical response function (from points of the source aperture to points of the receiver aperture) to allow generous sized instrument source and receiver apertures.</p> <p>The entrance and observation angles of the retroreflectometer affect the readings. As specified by the European Committee for Standardization (CEN), the entrance and observation angles shall be 88.76° and 1.05°, respectively. This test method is intended to be used for field measurement of pavement markings but may be used to measure the performance of materials on sample panels before placing the marking material in the field.</p>

White textiles, paints, and plastics are a few of the materials that can be described by the indices of yellowness or whiteness calculated by this practice.</i></p>	60 days from notification
PAINTS AND VARNISHES	UGANDA	13/07/2018	<a href="#">G/TBT/N/UGA/886</a>	<p>Paints and varnishes</p> <p><i>This Draft Uganda Standard covers the determination of lead contents between 0.01 and 5%, cadmium contents between 50 and 150 ppm (mg/kg), and cobalt contents between 50 and 2000 ppm (mg/kg) present in the nonvolatile portion of liquid coatings or contained in dried films. There is no reason to believe that higher levels of all three elements could not be determined by this test method, provided that appropriate dilutions and adjustments in specimen size and reagent quantities are made. Only pigmented coatings were used for evaluating this test method, but there is no reason to believe that varnishes and lacquers could not be analyzed successfully, provided that appropriate precautions are taken.</i></p>	60 days from notification
